## SUMMARY

---

AI & ML undergraduate (CGPA 8.4) with hands-on experience building and deploying full-stack MERN applications and Python-based AI agents to the cloud. Built a multi-domain LLM triage system using RAG and Groq LLaMA 3.3, and a cloud-deployed stock trading platform (Netlify + Render) with JWT auth and REST API testing. Strong in MVC architecture, REST APIs, and shipping tested, production-ready projects.

## SKILLS

---

**Languages:** Python, JavaScript, C++, Java

**Frontend:** React, HTML5, CSS3, Bootstrap

**Backend:** Node.js, Express, REST APIs, Socket.io, MVC Architecture

**Databases:** MongoDB, SQL

**AI / ML:** LLM Integration, RAG, TF-IDF, Groq API, LLaMA 3.3

**Cloud & Deployment:** Netlify, Render

**Tools & Testing:** Git, GitHub, VS Code, Thunder Client, JWT, Google Maps API

## EDUCATION

---

**B.E. – Artificial Intelligence & Machine Learning**

2023 – 2027

G M Institute of Technology, Davangere | CGPA: 8.4 / 10

PUC – KLE's Independent PU College, Chikodi | 2021 – 2023 | 91%

10th – S V E S English Medium High School, Shirguppi | 2021 | 86%

## PROJECTS

---

**Multi-Domain Support Triage Agent** | [GitHub](#)

- Built a Python AI agent that reads support tickets and routes them across HackerRank, Claude, and Visa using RAG — resolved 23 out of 29 real tickets correctly
- Wrote custom TF-IDF search over 773 local documents and connected Groq LLaMA 3.3 70B to generate corpus-grounded responses with no hallucination
- Added a two-step safety filter — keyword rules block injection/manipulation attempts before they reach the model

*Tech: Python, Groq API, LLaMA 3.3 70B, TF-IDF, RAG, python-dotenv*

**Mern-Trading-platform** | [Live Demo](#) | [GitHub](#)

- Built a full-stack stock trading app with portfolio, holdings, positions, and order management — deployed to the cloud on Netlify (frontend) and Render (backend)
- Implemented JWT auth with bcrypt password hashing and HTTP-only cookies for secure login and signup
- Designed REST API backend with Node.js, Express, and MongoDB using MVC architecture, with separate dashboard and landing page frontends
- Tested and validated all REST API endpoints using Thunder Client, verifying request/response handling and edge cases before frontend integration

*Tech: React, Node.js, Express, MongoDB, JWT, bcrypt, REST APIs, Thunder Client*

**Emergency Healthcare Management System** | *UTKARSH 2K26 – National Level Hackathon*

- Built a real-time emergency response platform connecting users, hospitals, and ambulances with live tracking using Socket.io and Google Maps API
- Delivered a working full-stack app under hackathon deadline as part of a team — handled task split, feature integration, and final demo

*Tech: React, Node.js, MongoDB, Socket.io, Google Maps API*
